

KKT: Improved Teeth for Wood Grinders

Standard Hardfaced Tooth

- varying grit quality
- bolts exposed to wear
- limited carbide thickness
- uneven distribution of grit particles

Corrugated surface for optimized material flow
→ **increased output**

Optimized cutting angle
→ **better output material**

Added steel volume in corners
→ **consistently high cutting performance**

Deep bolt holes
→ **easier tooth removal**

Maximum thickness of hardfacing in areas with highest wear
→ **longer tool life**

Available in different sizes!

KING GRIT™

KingGrit™ highest quality virgin carbide grit
→ **same performance for every batch**
